

AMENDMENTS TO THE SPECIFICATION

Amend the specification paragraph starting on page 4, line 20, and ending on page 4, line 30, as follows:

The ring 10, which may be made of molded plastic, forms a single-piece body which comprises several parts. In this way, the ring 10 forms a ~~ring~~ skirt 101 which is equipped with attachment means designed to co-operate with a neck of a recipient. Said attachment means may be very varied, such as screw-on or clip-on means. In the examples of embodiments shown in the figures, the attachment means comprise clip-on heads 109 arranged near the free lower end of the lugs 108. The skirt 101 is, as a result, composed of a plurality of lugs 108 arranged side by side but separated by spaces extending vertically. It is understood that the clip-on heads 109 located at the free ends of the lugs 108 have a certain degree of freedom, particularly in the radial direction.
